Things get even more complicated if you have to perform operations like addition and multiplication, especially if you want to do them without using a calculator. Learn and memorize hexadecimal operations using flash cards dmHexCards is an application that enables you to learn how to perform basic hex calculations without the need for a calculator. It achieves this by using a flash card system which generates random operations for you to calculate. After you reach a solution, you can reveal the answer and check whether you got it right. The flash cards feature addition and multiplication operations and you can switch between them with ease by clicking on the operator. dmHexCards supports only single digit calculations, which is probably about as far as anyone would be willing to go without

The flash cards feature addition and multiplication operations and you can switch between them with ease by clicking on the operator. dmHexCards supports only single digit calculations, which is probably about as far as anyone would be willing to go without using a calculator. So, in essence, the greatest number achievable would be F\*F, which is 225. For every calculation, the application displays the binary and decimal alternatives of the result as well. These can be useful if you are not yet familiar with how hexadecimal numbers work, or if you are interested in learning a bit of binary at the same time. The aforementioned binary values are displayed in an 8-bit variable, although for the numbers A through F only 4 bits are used for convenience. Hexadecimal (hex) math is the base of the hex number system. It's not just for those who like acronyms in their apps and games. There's a reason why many calculators support hexadecimal numbers. In addition to the standard XOR, AND, OR and XNOR, you'll find some other handy operators: XOR - Exclusive OR AND - Logical AND OR - Logical OR XNOR - Exclusive NOR DEC - Decimal number HEX - Hexadecimal number Auto Correct: Inserts the missing zero between the hex digits Replace any missing digits with the digit of the next hex number in line Convert decimal to hex Convert hex to decimal Erase all hex Select all hex Switch between auto-correct and regular mode Usage: Select digits from 0 to 9 Enter 0 to 9 Type ':' to select Type your math operation Use Ctrl+Z to undo your changes The result is shown in the right field, and if you've hit the right option, you'll be shown the answer to your question with the correct operator used to give you the value. When done, click the red X to check your result. The result is stored into the binary/decimal field for future reference Manage your own teaching tips Use a TXT file in the app's directory to add your own tips to the application for future reference. Hex-related tips Convert your math operation into hex Convert decimal to hex Convert hex to decimal Convert HEX to DEC Display the number in Binary Display the number in Decimal Display the number in Hex Display the number in Octal Use this tool for factoring Use this tool for creating random hexadecimal numbers Use this tool for creating random decimal numbers What's new in dmHexCards for 10.1: \* Support for numbers up to F\*F (1023) \* Support for 13 digits of hex numbers \* History support \* Support for a new application name and icon The new AppMakr editor icon Support for XOR, AND, OR, XNOR, DEC and HEX operators New hex result format Corrections for some cases where the wrong operator was used Various interface adjustments for clarity My positive comments Current rating - 4.6 You can download dmH
